

## RM 652 FULL DEPTH PAVEMENT REHABILITATION TEXAS DEPARTMENT OF TRANSPORTATION

### CLIENT

TXDOT

### LOCATION

CULBERSON COUNTY, TEXAS

### ROLE

CEI DESIGN-BID-BUILD

### PROJECT

\$22.5 MILLION

ECM International was selected as Prime Contractor to provide Construction Engineering and Inspection (CEI) services for the Texas Department of Transportation (TxDOT) for a 7-mile long roadway project in Culberson County near Orla, Texas.

The RM 652 Project was designed to accommodate and sustain the increased volume of heavy load traffic resulting from the oil industry in the West Texas Region. Key project elements include full-depth roadway rehabilitation and replacement of existing storm drain systems. Challenges included the vast rolling terrain, single lane, 2-way traffic operation, and high volume of heavy and oversized vehicles.

ECM provided a wide-range of CEI services from Public Information services to Project Management and included daily observation, materials testing, schedule evaluation and weekly meeting management.

ECM has demonstrated proficiency providing the personnel, project experience, and understanding of TxDOT specification requirements across west Texas.
